**Re Item V**

**Reasoned statement with regard to novelty, inventive step or industrial applicability;  
citations and explanations supporting such statement**

1.) Reference is made to the following document:

D1: SANTINI FERRUCCIO ET AL: 'Thyromimetic effects of 3,5,3'-triiodothyronine sulfate in hypothyroid rats' ENDOCRINOLOGY, vol. 133, no. 1, 1993, pages 105-110, XP002272821 ISSN: 0013-7227 cited in the application

2.) The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claims 1-7, 9-12, 15,16 is not new in the sense of Article 33(2) PCT.

Document D1 discloses that treatment with T3 sulfate leads to a significant correction of several parameters of hypothyroidism. Since the thyromimetic effects of T3S would be self-limiting it is suggested as thyromimetic agent with reduced risk of inducing hyperthyroidism.

A composition administered to sick animals is regarded as a medicament.

Therefore the subject matter of claims 1-7, 9-12, 15,16 is not new.

3.) The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claims 8,13,14 does not involve an inventive step in the sense of Article 33(3) PCT.

The subject matter of claims 8,13,14 differs in the addition of thyroxine. The problem to be solved by this difference may be regarded as to provide a further medicament for the treatment of hypothyroidism. The addition of compound to be known for the same treatment is a matter of routine for the skilled person.

It has to be noted that no unexpected effect has been shown for the addition of thyroxin. Additionally no data are provided for the alleged oral activity of the defined formulations.
